

# FutureGel

## Features & Benefits

### Support

FutureGel is intuitively concentrated on the top of the sleeping surface providing better support and cooling efficiency than other gel foams.

Heat can be dissipated up to three times faster than traditional gels, enhancing user comfort.

### Technology

FutureGel provides a breathable, air permeable surface. Once applied (to any polyurethane foam) it can be perforated or further machine processed to enhance airflow.

FutureGel can be banded to provide areas of alternating coverage, airflow and cooling.

### Sustainability

FutureGel has been dermatologically tested and is safe for direct skin contact.

No use of adhesives or solvents when applied to polyurethane foam.

Can be recycled after use to reduce the environmental impact.

Made in the U.S.A.

### Specifications

**Applied to the following thickness:**

No PCM: .5mm, 1mm

PCM: .5mm, 1mm

Branded: .5mm, 1mm

**Can be applied to:**

Next Foam

Quilt Rolls

Visco Foams
